

## BI Automation Server

### Power tools for Microsoft BI

# Datasheet

**CloudOLAP AutomationServer** is a .NET service that provides a smart, convenient way to run Microsoft Business Intelligence warehouse on a scheduled basis. Our AutomationServer orchestrates and balances ETL jobs and makes sure that your or your client's data warehouse and datamarts are up-to date and processed.

The CloudOLAP AutomationServer improves performance and makes data warehouse, cubes and ETL management easy. The CloudOLAP AutomationServer may be installed on-premises or on the cloud (SaaS). You may connect to the Automation Server via CloudOLAP Online, CloudOLAP Developer Studio PRO or through our SDK APIs and get a complete picture of your data warehouse.

The CloudOLAP AutomationServer relieves the data warehouse administrator from many routine tasks and provides a new level of management, automation and control over your ETL processes, cubes and data.

#### Features and Benefits:

Improved datawarehouse maintenance via multiple datamarts and ETL tasks management

- ✓ Reduced costs of implementation and administration
- ✓ Scheduling
- ✓ Balancing and isolation for ETL processes based on dimension metadata
- ✓ Web API Interface

#### Requirements

32 or 64-bit

Microsoft SQL Server 2005, 2008, R2

Microsoft Analysis Services

Windows XP, 7, Vista, Server 2000, 2003, 2008

.NET 3.5 SP 1
