

BI Virtual Server

Power tools for Microsoft BI

Datasheet

CloudOLAP VirtualServer is a virtual machine configured and integrated with CloudOLAP BI Suite. With CloudOLAP VirtualServer you instantly scale your Microsoft BI to reliable Amazon Cloud Servers. You control the server online or from the CloudOLAP Developer Studio PRO. Each server instance on the cloud includes a Windows 2008 Server with Microsoft SQL Server 2008, Analysis Services and CloudOLAP AutomationServer. All licensing is included. You can run your ETL processes on the cloud and let your clients instantly access them from SharePoint or Excel. So, in 5 minutes you can run a 64-bit 8 core 64Gb of RAM Business Intelligence server for just \$5/hr. You can choose your own cloud server configuration in just a few clicks. Customizations are available.

Features and Benefits:

- ✓ On-demand payment (SaaS) for only the time you need
- ✓ Testing your BI for scale by using virtual servers on the cloud (no need to purchase hardware)
- ✓ Improved datawarehouse maintenance via multiple datamarts and ETL tasks management
- ✓ Reduced costs of implementation and administration
- ✓ Scheduling
- ✓ Balancing and isolation for ETL processes based on dimension metadata
- ✓ Web API Interface

Requirements

None

Virtual Server may be started online from our Web site or from the CloudOLAP Developer Studio Pro tool

Runs on Amazon EC2 cloud, Rackspace, any managed server (additional provisioning may be required if you need it on your cloud)
